

Drinking and Reproductive Health

A Fetal Alcohol Spectrum Disorders Prevention Tool Kit for Women's Health Clinicians

Prevention of fetal alcohol spectrum disorders (FASD) begins during routine gynecologic care prior to conception and continues through the postpartum period. With information on screening, education, and counseling, this publication will help women's health care clinicians prevent FASD when they encounter risky drinking, regardless of pregnancy status.

This *Tool Kit* contains a brief guide, resource information, and patient handouts that can be downloaded and printed.

A continuing education activity sponsored by the American College of Obstetricians and Gynecologists
Supported by the US Department of Health and Human Services, Centers for Disease Control and Prevention
