These modules, designed to prepare residents and fellows for practice, are optimally presented in an interactive didactic session facilitated by a clinician with an interest in coding, optimally a clinician who has attended an ACOG coding workshop.

1. **Topic-**
   **Module 3: Global Package Obstetrics and Gynecology Surgery**

2. **Content-**
   In this session, the basic principles of global surgery packages are presented.

3. **Goals: Aims/Outcomes-**
   The resident will differentiate global surgery package service from E/M or other provider service

4. **Objectives-**
   The resident will describe “global package”
   The resident will define components of a global surgical package, operative report documentation, and Modifiers
   The resident will define components of the global obstetrics package
   The resident will review general coding rules for Obstetrics services, distinguishing between antepartum, delivery and postpartum services

5. **Materials and Aids-**
   CREOG PowerPoint presentation
   Optional: Laptop computers with Internet connectivity to access cms.gov web pages for reference

6. **Procedures/Methods-**
   **A. Introduction-**
   Overview of CREOG presentation on global surgical package including multiple procedures, co-surgeons and modifiers; and what is included in the global obstetrics package.

   **B. Development-**
   Discussion with a practicing clinician and/or representative from your coding and billing personnel regarding best practices for procedural documentation, and common global obstetrics or gynecologic surgical package coding errors.

   **C. Practice-**
   1. Discussion of types global gynecologic surgery packages
   2. Discussion of how to identify what is included in the global fee for a given procedure
   3. Discussion of coding for multiple procedures, co-surgeons, and modifiers.
   4. Discussion of global OB package and what is included
   5. Discussion of procedure only visits versus E/M plus procedure
D. Independent practice-
1. The resident will appropriately document surgical procedures to aid in appropriate coding and billing. The resident will identify services that are included and what services are additional to the global OB package.
2. The resident will appropriately code a procedure only visit versus an E/M visit plus procedure.

E. Accommodations (Differentiated instruction)-
1. Internet resources are available to the resident, including the PowerPoint and notes.
2. ACOG coding website [https://www.acog.org](https://www.acog.org)
4. AMA coding resources

F. Checking for understanding-
The PowerPoint presentation contains questions that are used to ensure residents understand concepts. These questions may be answered through basic audience participation, or using an audience response system.

G. Closure- Summary of presentation-

7. Evaluation-
Sample cases are provided incorporating topics included in all three modules. These can be completed as an interactive group activity, or could be assigned as a post-course evaluation of knowledge gained.

If surgeons do their own surgical coding at your institution, mentored coding by the resident at the conclusion of a case is an excellent way to evaluate mastery of concepts.

Coding audits are another potential way to evaluate individual resident grasp of concepts.

Evaluation of curriculum by attendees.
