Our model of sustainable interventions and strategies includes: and newborn mortality and morbidity.

- Enhancing team-based care, quality improvement and advocacy to improve women’s health care.
- Improving medical education, residency programs and continuing education using standards approved by the Council on Resident Education in Obstetrics and Gynecology (CREOG).
- Sharing the best science and latest evidence-based guidelines on women’s health appropriate to low-resource settings.
- Health workforce development and building health care teams to provide appropriate obstetric care, integrate family planning and immunizations and other health interventions.
- Increasing ability of professional associations to conduct quality oversight and assessment of health teams’ skills and outcomes.
- Collaborating with professional associations to augment quality of education, train ob-gyn residents and improve facility-based care and data collection.
- Strengthening professional associations for the benefit of health systems and national investments in women’s health.

The Office of Global Women’s Health
